

# Ticinetto Superiore

## V5A5IV (Chironico)

Checkpoint at the bridge at the start. A descent is possible for teams that are comfortable with high flow and vertical canyons.

### Approach (30 min)

Park your car at the parking for Ticinetto intermedio. From the parking follow a faint path upstream on true left. The path ascends steep through a beautiful gully. Turn sharp left and traverse onto the plateau. When you see a arrow on a tree go left until you come across a small bridge where the canyon starts.

### Canyon (3 hr)

The canyon seems to have considerable flow when other canyons are dry so make sure you are happy with the flow before you commit as there are no escapes. If you are comfortable doing Ticinetto intermedio you should normally not have any problems with the superiore.

The last two rappels are well away from the water but higher up you have to cross the flow several times on rope and there are a few pools which will get "exciting" in higher flows.

### Ropes

2 x 90 m rope should get you down.

All lengths are estimated and drawn from memory!
